SUMMARY

Pharmacist with seven years in quality and regulatory affairs for medical devices, across the whole chain: manufacturing, export, import and distribution. I have handled company licensing and product registration, mostly products: technical files, labelling and risk management for Class I to IV devices. At a 16-person manufacturer I covered quality from design review to production, and I have run ISO 13485 quality systems ever since, from document control to CAPA and supplier qualification.

In the last two years I have built AI workflows that read documents, pull out what matters and feed the next step: tender analysis, supplier document control and regulatory monitoring. I map the process with the people who run it, write the specification, build with Claude Code and Lovable, and watch real usage to improve it. Supplier qualification went from roughly a week of work a month to about four hours, and a regulatory search I built for my own work became Mirada Search AI, now in my portfolio.

EXPERIENCE

Quality & Regulatory Affairs Analyst · Responsible Pharmacist Nov 2021 to present
Angiolux, medical device importer and distributor · Porto Alegre, Brazil

- Register Class I to IV devices from international manufacturers: I review their technical documentation, risk files and labelling, and send them a gap list to close before we submit to ANVISA.
- Run the ISO 13485 quality system: CAPA, change control, ANVISA audits, complaint handling and post-market surveillance with manufacturers. Moved the paper archive and approvals to SharePoint and Microsoft 365.
- Answer technical and regulatory questions from the sales team and hospital customers, and prepare customer material when a product has a complaint.
- Replaced an email and spreadsheet routine for 75 suppliers with a self-service platform. Monthly upkeep fell from roughly a week of work to about four hours; half the suppliers now upload their own documents.
- Built a tender analysis engine: it reads the tender text, identifies each product requested, matches it against our catalogue and flags errors and mismatches before we bid. A daily monitor reads the Diário Oficial and hospital portals and sends only the relevant tenders.
- Built a commercial letter generator that cut each letter from about 40 minutes to 2.

Founder, Regulatory Consulting Mar 2024 to present
Regulamentei · Remote

- Help companies get ANVISA licences and set up their quality systems: gap analysis, process design and documentation.
- Created Regulamentei SGQ, a digital quality system for device distributors (MVP stage), and ran discovery and sales calls with prospects.
- Built Mirada Search AI, a regulatory search across Brazilian government data. Wrote the PRD and used LogRocket session reviews to fix drop-off at sign-up and pricing.

Quality & Regulatory Affairs Officer · Responsible Pharmacist Dec 2016 to Nov 2018
Vision Hitech, medical device manufacturer (16 people, quality team of four) · Brazil

- Covered quality and regulatory end to end, working daily with production: design reviews, design documentation, product verification on the line, design transfer to production and sterilisation validation (ISO 17665).
- Took part in the company's ISO 13485 certification.
- Registered devices for export in six countries in the Middle East and North Africa.

Earlier: Panvel, Pharmacist (2021) · Kley Hertz Farmacêutica, Regulatory Affairs (2019 to 2020) · Fleury, Regulatory Affairs (2018 to 2019)

SKILLS

Quality & regulatory	ISO 13485, ISO 14971, ISO 15223-1, ISO 17665, GMP, ANVISA RDC 665/2022 and 751/2022, EU MDR (working knowledge)
AI & tools	Claude Code, Claude, Codex, Lovable, Supabase, Python, REST APIs, LogRocket
Methods	Requirements gathering, process mapping, gap analysis, PRD and use-case specs, stakeholder management, usability review
Languages	Portuguese (native), English (C1), Spanish (reading)

EDUCATION

Bachelor's in Pharmacy, Federal University of Rio Grande do Sul (UFRGS), 2009 to 2016 · Postgraduate in Regulatory Affairs, Instituto Racine, 2018 to 2019
